SEPTEMBER 2009

LytecMD Web View

Lytec MD Web View is a full-featured patient portal that allows physicians to share patient charts online safely and conveniently. This service provides patients, providers, and consulting physicians the ability to view patient information over the Internet in a secure and confidential manner. Patients can view chart data including future appointments, lab results (with notes from their provider), overdue health maintenance, and current prescriptions (with clinical notations translated into plain English). Additionally, providers can use **Web View** to view their patients' charts from any PC with an Internet connection; consultants can view charts for specified patients to facilitate communication and consultation.

Web View also helps to connect patients and providers by offering online:

- Appointment Requests
- New Patient Registration
- New Patient Intake Forms
- Secure Messaging

Key Features

- Reduces Phone Calls
- Enhances Patient Communication

About Our Organization:

At Health Management Consultants, LLC. our goal is to maximize the efficiency of the business side of health-care. As a woman-owned, small business, we are MBE/DBE certified. We serve the entire mid-Atlantic region, at the Federal, State, and local level, catering to a variety of

needs, all of which help to improve the operations and performance of healthcare practices. Please do not hesitate to contact us should you have any questions regarding our company and/or our services.

System Support Corner

Lifeboat helps healthcare organizations meet HIPAA compliance requirements to responsibly protect patient data. Lifeboat is HMC's new online backup service that allows practices to backup valuable computer data offsite via the Internet. Backups begin automatically and data is redundantly copied to two separate underground sites. Separate facilities help ensure the security of your critical data. Prices start as low as \$40/month. Call Gwen or Lindsay to start protecting your data or if you want more information.

**DON'T FORGET TO
BACKUP YOUR DATA AND
STORE IT OFF SITE.**

Health Care*

Physicians Weigh In:

When asked about the importance of various EHR components, physicians identified the following as the five most important:

- Lab test results reporting and review
- Tools that allow doctors to dictate a physician narrative into the EHR
- E-Prescribing
- Secure health messaging between caregivers
- Keyboard/Mouse support via speech recognition for data entry into the EHR

Meaningful Use Criteria

The Office of the National Coordinator for Health Information Technology (ONCHIT) will soon release the final draft of "meaningful use" criteria. This information defines the extent that physicians must be using an EMR to qualify for the incentives. Watch for this information in the news and our future newsletters.

Technologies for Survival- Electronic Prescribing

More physicians have started e-prescribing due to the CMS 2% **incentive**. E-prescribing has other benefits as well, such as:

- Refills are more easily accomplished
- Staff receive fewer phone calls from pharmacists
- Pharmacy questions can be asked and answered on-line
- Recordkeeping is completed as the prescription is written or renewed
